Chipping with the cutting direction parallel with the
fibre direction in the wood should theoretically give
chips (p-chips) exhibiting a minimum of compression
damage. This principle has long been used in the
flakers, but these machines produce chips which are
too thin for pulp production and in addition their

HARMFUL PITCH IN PULP. [1963] [7]p. 3 refs.
Order from SLA \$1.10 63-18811

Trans. of Svensk Pappers-tidning, 1963, v. 66, no. 3,
p. 51-54.

DESCRIPTORS: *Pitch (Material), Flotation (Separation),
*Wood pulp.

A test method was developed, based on the principle of
pulp flotation in aqueous medium, which may be used
to determine the amount of pitch separated from wood
fibers. The total amount separated is considered harm-
ful, since it is not known whether the emulsified portion
will deposit on parts of the mechanical equipment which
are continuously in contact with pulp suspension. Fresh
softwood pitch showed an increased tendency to form
deposits due to its greater plasticity caused by terpenes
